CASE STUDY

ROCHÉ

WOLVERHAMPTON MARKET :: T55 SECURITY SHUTTER

Wolverhampton Market underwent a major overhaul. The project involved closing all of the indoor stalls and moving them elsewhere; mainly into shipping containers which had been specially designed for the purpose. Our T55 security shutters were used on each of the 16 cabins, helping to secure each owners new accomodation and providing valuable piece of mind.

WOLVERHAMPTON MARKET

The market officially re-opened on Tuesday 17th July offering 48 tented stalls and 16 purpose-built cabins. It now has a new modernised outdoor market area and offers customers an array of both traditional and exotic foods.

THE PROJECT

Roché were asked to supply and install 16 insulated aluminium security shutters to help with the rejuvenation of the Market Square. A key design concern was providing a modern solution, in keeping with the brightly coloured units, which also allowed for security at a stall level.

The project was part of a £4.9 million development which saw the indoor stalls relocated to the outdoors.

“At first I was worried whether the business would be more vulnerable being outside, but when the council told us we’d have roller shutters I felt relieved. They’re unobtrusive and really easy to open and close, too”

Donna Walton, Snack Services

THE SOLUTION

An aluminium T55 security shutter was fitted to each purpose-built cabin, with a double skinned slat and insulated core for added insulation. Roll formed aluminium guides were used to fix to the edges of the cabins, with an anthracite finish to match the modern aesthetic and décor.

The systems compact design accounted perfectly for the small openings and enabled a small box size. Roché were also able to keep lead time to a minimum and keep the project on schedule.

“For us it’s been much busier outside. It’s been a big change but it’s for the best, and we love our new home now”

Donna Walton, Snack Services
